

## Exercises

Below are few exercises you can work/implement to gain more experience developing the Dapp.

1. When the funds are released, send 1% of the amount to Arbiter as a service fee.
2. Currently, anyone can finalize the auction and become an arbiter. Implement the functionality where a user has to deposit 5 Ether to become an arbiter. They can at any point change their mind and be able to get their deposit back. They should no longer be able to participate in your app as an arbiter.
3. Add a functionality where Arbiter's deposit is burned if you find out that the arbiter is a bad actor (has colluded with buyer or seller).
4. Currently, the seller doesn't receive any reviews for their service. Implement the functionality for buyer to give a rating to the seller.
